# Benefits

- **ECONOMIC BENEFITS:** Because synthetic grass does not require watering, except to clean it occasionally, you can feel great knowing that you are saving precious water. Artificial grass lawns can save you 50% to 70% of your total residential water usage. Synthetic turf grass significantly reduces your water bill and will do so for decades to come. An artificially landscaped yard will pay for itself rapidly in water and maintenance cost savings alone.
- **PET BENEFITS:** Artificial turf lawns are great for pets, especially dogs. It seems impossible to have a dog and simultaneously maintain a beautiful lawn, but synthetic turf grass is the answer. Dogs and their masters love artificial lawns because they are clean, low maintenance, and always green and lush. Dead spots in your real grass/sod are a thing of the past. Artificial grass will enhance your home's appeal with a beautifully manicured year-round lawn. Dog droppings and urine will not stain or discolor the artificial grass, and our specially manufactured artificial/synthetic turf backings allow urine to drain right through the turf.
- **DRAINAGE BENEFITS:** Synthetic turf drains better than natural sod grass lawns. Depending on the backing used, each square foot of artificial turf is rated to drain an average of 30 gallons per hour – and we will most likely never see rain conditions like that. Below the artificial grass a crushed stone base (aggregate) provides for rapid drainage and the grade of the earth below the aggregate directs the flow of water to drains or wherever water should flow in your specific landscaping situation.
- **ENVIRONMENTAL BENEFITS:** Synthetic turf lawns are environmentally friendly in many ways. Synthetic grass conserves precious fresh water resources. Artificial grass lawns require no fertilizer which saves area bays, lakes and the Ocean from polluting urban run-off. Herbicides are unnecessary because artificial lawns are not susceptible to lawn pests and diseases. Not mowing the lawn is a great help to our ozone layer, too. Did you know that one lawn mower can pollute as much as ten (10) cars!?! Not to mention saving the lawn/yard man the gas he would burn on the way to maintain your real grass lawn.
- **ENJOYMENT BENEFITS:** Synthetic yards add usable square footage to homes. Our artificial turf customers use their lawns more, where before it was almost an off-limits area. Lawns that were previously a dry, dusty wasteland or an overwatered muddy/dirty area are now pristine manicured grass which is always available to be enjoyed. If you want to soak the artificial turf grass down with water all day, put out a Slip N Slide, and have a turf party, artificial grass from Sports Turf can take whatever you can dish out. You will find, as most artificial grass owners do, that this product will improve your life in more ways than you think.
- **LABOR-SAVING BENEFITS:** Synthetic grass lawns eliminate many mundane chores related to natural grass. Chores such as pulling weeds, seeding, thatching and aerating are a thing of the past. Spend the most precious resource you have (TIME) doing something other than maintaining your lawn.
